PROFESSIONAL SUMMARY

Frontend Engineer with 6+ years of professional experience building production applications with React, TypeScript and Next.js. Strong background in frontend architecture, design systems, product UI and fullstack feature development across Python, PostgreSQL, Supabase, authentication, APIs and search infrastructure. Owns product work from interface design and architecture through implementation, testing, review and release. Builds open-source developer tools and has experience shipping software for secure, offline environments. Experienced using Claude, Codex and other AI agent harnesses, to accelerate development while designing guardrails that improve generated output and verification.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS, Tailwind CSS, TanStack Query, tRPC, SSR

Backend & Data: Python, PostgreSQL, Supabase, Drizzle ORM, REST APIs, Elasticsearch.

Testing & Quality: Vitest, Jest, React Testing Library, Playwright, MSW, CI/CD.

Frontend Architecture: Design Systems, Component Libraries, UI Architecture, Responsive UI, Figma.

Authentication & Infrastructure: Azure, Keycloak, OAuth, OIDC, Docker, Git, Turborepo.

PROFESSIONAL EXPERIENCE

RIGR AI

Cork, Ireland

Design Engineer / Fullstack Sales Engineer

May 2022 - Present

- Own design and frontend engineering across ARICA, VST, Tailli and Macha EST, taking product work from interface design and interaction flows through React implementation, testing, review and release.
- Own the majority of ARICA's frontend development, accounting for more than 75% of repository commits and reviewing more than 95% of pull requests and code changes from November 2023 to present.
- Shipped ARICA as a media-enabled investigative platform after collecting feedback from multiple law-enforcement agencies, enabling investigators to work with media inside the platform rather than relying on external tools; ARICA is used by 51 law-enforcement organisations across 30 countries.
- Led ARICA's authentication migration from Azure AD B2C to Keycloak, implementing OIDC and RBAC, supporting backend changes and building Python migration tooling to preserve existing user access.
- Led a full VST interface redesign, designing its UI, components and interactions in Figma and Claude before implementation, and established a reusable design system.
- Led the migration of VST's React frontend from Create React App to Vite within its monorepo, improving the frontend development workflow and maintainability.
- Reduced VST's initial media-catalogue load time from approximately 9 seconds to 3 seconds by optimising API requests and Elasticsearch responses; reduced response size from 9.7 MB to 176 KB and incremental search responses to approximately 2.7 KB per keystroke.
- Built fullstack features across ARICA and VST using React, TypeScript and Python, supporting workflows for transcription, OCR, summarisation, diarisation, face recognition and other video-analysis capabilities.
- Led the integration of Tailli, Rigr's offline licensing platform, into VST and designed platform-specific licensing and activation flows for secure, air-gapped environments; also designed interfaces for Macha EST, an Electron application for encrypted evidence workflows.
- Automated linting, formatting, pre-commit checks, UI and backend testing, Playwright workflows, Changeset releases, automatic tagging and release-note generation; reduced recurring CI failures from approximately every other release cycle to zero and added regression coverage for a repeatedly failing date picker. Led webinars, demonstrations, technical sales calls, pilots, onboarding and deployments.

BETTERCHALK

Pennsylvania, USA

Fullstack web developer Intern

March 2022 - April 2022

- Developed product features and curated courses for the platform in preparation for release.
- Refactored application areas to strongly typed TypeScript, improving type safety and maintainability.

MUZZLAB

Lagos, Nigeria

Frontend developer

March 2019 - Dec 2020

- Built Biko.ng, an ecommerce platform that later received a \$5,000 Tony Elumelu Foundation grant.
- Developed product interfaces, integrated frontend features with backend services and supported the platform through its early growth.

SELECTED PROJECTS

GOBYN

Texas, USA

Fullstack Engineer - Contract

June 2026 - September 2026

- Built a multi-tenant personal-finance platform with Next.js 16, React 19 and TypeScript in a monorepo containing the website, authenticated dashboard, shared UI system and database packages.
- Built typed application data flows with tRPC and TanStack Query, reusable UI with Tailwind CSS and accessible primitives, and financial visualisations with Recharts and Motion.
- Implemented Supabase SSR authentication with OAuth and MFA, backed by PostgreSQL row-level security for authenticated profile and financial-data isolation.
- Designed PostgreSQL schemas and migrations with Supabase and Drizzle ORM, including grants, RLS policies, audit logging and database tests; integrated Plaid API.
- Built Playwright, MSW and pgTAP coverage for browser, integration and database workflows, with separate deterministic mock and real-service test configurations.

OPEN SOURCE PROJECTS

UI-THEME - [UI-THEME.DEV](#) • [GITHUB.COM/TONYEDGAL/UI-THEME](#) • [NPMJS.COM/PACKAGE/@UI-THEME/WEB](#)

Creator / Maintainer

- Built and currently maintain a framework-agnostic TypeScript theming library for React applications, supporting system themes, colour themes and animated transitions through the View Transitions API.
- Designed the public developer API and framework integrations for Next.js App Router, Next.js Pages Router and TanStack Start.
- Implemented SSR-safe theme handling using server-readable cookies and pre-hydration strategies to prevent incorrect themes during initial rendering.
- Built configurable transition behaviours, system-theme detection, colour themes, CSP nonce support and programmatic theme controls.
- Maintain documentation, examples, automated tests, package releases and compatibility across supported frameworks.

SPACEMAN REACT THEME ANIMATION - [GITHUB.COM/TONYEDGAL/SPACEMAN-REACT-THEME-ANIMATION](#) •

[NPMJS.COM/PACKAGE/@SPACE-MAN/REACT-THEME-ANIMATION](#)

Creator / Maintainer

- Built the open-source predecessor to UI-THEME, an animated React theme-transition library using the browser View Transitions API; reached approximately 1,000 weekly downloads at peak.

SPACEMAN SKILLS - [GITHUB.COM/SPACEMANSH/SPACEMAN-SKILLS](#)

Creator / Maintainer

- Built an open-source skills repository for Claude, Codex and other AI agent harnesses, that improves agent output through reusable instructions, focused workflows and verification-oriented guardrails.

EDUCATION

UNIVERSITY OF BENIN
B.Sc. Industrial Chemistry

Edo, Nigeria
2014 - 2018
